# Application Success Stories

The beginning of Hokuriku-Seiden was in 1982. Since then, they have pursued coating technology as a specialized coating company. As a coating specialist, they are now well known as one of the leading companies. The company considered the introduction of an automatic powder coating line with focus on aluminum profile in 2019. Their demand was high productivity,

multi color coating and high-quality results. Gema proposed a powder coating line with powder management center OptiCenter All-in-One (OC06) with control unit MagicControl 4.0 (CM40) to meet their requirements. As a result, these state-of-the-art systems meet customer demands, resulting in high productivity and quick color changes, allowing for automatic

production with confidence. Their coating technology continue to evolve further in the future.
