## OptiFlex Pro B Spray with Application Pump Technology

Excellent productivity thanks to the reduction of manual touch-up!

Increased Performance

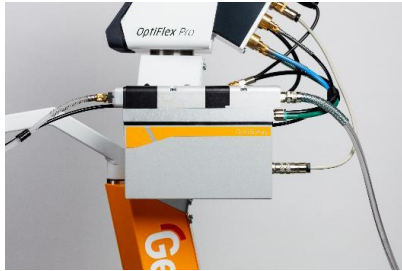

Touch-Up reduction

Up to 20%  
powder saving

# Application Success Stories

## Installation Key Data

- 1 x OptiFlex® Pro B Spray Manual unit
- 2 x OptiSpray AP01 Application pump
- 2 x OptiSelect® Pro GM04 Manual guns
- 2 x OptiStar® 4.0 Control unit

# Application Success Stories

Color Duemila was founded in 1990 and his operational headquarter is in the province of Forli Cesena - Italy. This company is specialized in industrial coating and thanks to its thirty years of experience, it guarantees high levels of quality in all fields of application.

The company has two powder coating systems, one automatic, with color change booth, equipped in 2016 with Gema venturi technology, and a manual static line with a Gema

OptiFlex 2B manual unit. Some of the wide range of products to be coated represented the classic "bottleneck" of a painting line. In fact the coating complexity of these parts frequently led to slowdown the conveyor and consequently loss of productivity.

After analyzing the problem, the owner Mr. Ferretti decided to replace the manual guns of the automatic booth with the new generation OptiFlex Pro B Spray with pump technology.

From the first day all operators gained considerable confidence in the new technology and painted with faster speed and without slowing down the automatic line. After a short time they also showed a significant reduction in powder consumption, estimated around 15-20%.

Mr. Ferretti is today very satisfied with the new OptiFlex Pro manual unit and is considering to replace the remaining equipment.
