Rodet SAS has been specialized in manufacture and sell of furniture for communities, based on steel tubes, since 1948. Installed on a 20'000 m<sup>2</sup> site, it offers a complete range of furniture for cafes, hotels, restaurants, schools...

Rodet is the European leader in metal trestles. Rodet has a design office, a prototyping workshop and test unit to meet the qualitative and aesthetic requirements of the market.

Rodet has been using tribo technology in the past. The new Gema plant, commissioned early 2020 replaced the old system and runs with corona technology. The customer was worried to change the technology. But from the beginning, the operators were comfortable with the new Gema equipment. They notice a reliable and constant coating quality. In addition Rodet relies on quick color changes. The new innovation OptiCenter All-in-One, first installation in France,

responds perfectly to fast color change demands of each coating team, that performs 5 to 10 color changes every shift. This important aspect contributes to increasing productivity. Finally, the team appreciates the clear and intuitive interface of the control unit.
